

ABSTRACT OF THE DISCLOSURE

A film holder has a strip film holder provided at a position where when one corner of the film holder is matched with a corner of an original bed of the image reader having the same positional relationship as the corner, as many frames as a half the number of frames of one roll of strip film are contained in the read area; when a corner on the opposite side to the corner of the film holder in the longitudinal side direction is matched with a corner on the opposite side to the corner of the original bed of the image reader in the lateral side direction, other frames than the frames of the strip film are contained in the read area. Accordingly, worsening the operability in reading a transparency can be prevented in the image reader which has a read area meeting as many frames as a half the number of frames of one roll of strip film and can read a transparency.
